

Tags

<style> : used to define style information (CSS) for a document.

<h1> : used to define headings in a page.

<p> : defines a paragraph

<div> : defines a division or particular section in a HTML document

 : used to insert an image

<a> : used link an document

<section> : defines a section in a document

 : used to list an item in an unordered list using symbols.

 : represents item in a list.

<footer> : defines a footer section containing info about authors like copyright, name, date.

The challenge that I faced during Task-2 are how to insert symbol while making list which later on I took help from W3schools website and how to display the copyright symbol in footer section which I got answer to it in a Google.
